Attention: Always test LineLED operation before installing. Connect LineLED to power supply to ensure it is working properly and no damage has occurred during shipping.

1

Clean the area thoroughly where the LineLED will be installed.

Remove the paper backing from the LineLED and firmly press down making sure there are no air bubbles that can cause surface irregularities. **Do not remove the adhesive, removing the adhesive may cause arcing of the Line LED tape.**

NOTE - When removing backing & laying LineLED to surface avoid installing with ripples & bending over 90°.

NOTE - Avoid sharp bends or bending on the solder joints near 1" on wire lead.

2

If length of LineLED needs to be adjusted on site, simply cut the LED strip in between solder pads. Always cut from end with no wire leads.

3

Always ensure power to power supply is off! Follow diagrams on page 2 to connect power feed wires to power supply.
