## Please read all instructions prior to installation and keep for future reference!

snap on lens

-film

1. Product should be installed by a qualified electrician.

If required for installation cut down the RO1.5 aluminum

extrusion to desired length with hacksaw or miter saw

that has an appropriate blade for cutting aluminum.

Always wear safety goggles when cutting. Then cut

down accompanying lens to fit the new length.

clean RO1.5

remove paper backing from Line LED strip

After cutting extrusion and lens, clean both thoroughly with a

wet rag and ensure they are completely dry before installing

LED strip. Gently press Line LED inside extrusion and then snap

wires to

power supply

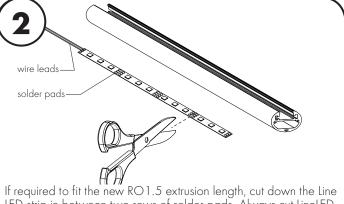

Remove the protective film from the lens.

on the lens.

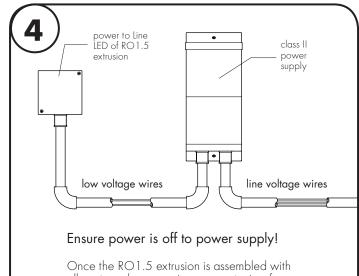

extrusion

groove

2. Prior to installation ensure power is off at fuse box to prevent electrical shock.

LED strip in between two rows of solder pads. Always cut LineLED from end without connector / lead wires. Ensure that Line LED strip fits **completely** inside the extrusion and the solder pads do not touch the metal end caps to avoid shorting of circuit.

all parts and accessories, connect wires from Line LED to appropriate power supply. For more information please refer to power supply and Line LED wiring instructions.
