7.1 Hero is powered by innovative Light Shift technology, where the direction of its light beam is adjusted by the joystick on the front face. The adjustment is locked by a single, recessed lock screw.

Turn the recessed (a) lock screw counter-clockwise with a 1.5 mm hex key to unlock the joystick.

Adjust beam direction by moving the (b) joystick in the desired direction. The joystick should move smoothly with light resistance, loosen lock screw further if it is hard to move.

Tighten the lock screw to finger tightness, it is not necessary to overtighten.
