Junction Box Installation

1.1 Install the drywall, then create a cut-out in the drywall with the dimensions shown. It is recommended to use a laser level to keep your cut as straight as possible.

1.1A The Junction Box can be installed to the wall framing using the adjustable hanger bars or stud mounting bracket as shown.

4. SUITABLE FOR DRY LOCATIONS ONLY

Reflector Installation

NOTE: Always install corner piece first

- 4.1** Measure and cut Reflectors to length to fit inside the drywall cutout. Mark stud/blocking locations on the Reflectors and then drill & countersink holes along the drill point groove for the mounting screws. countersink should be big enough for #6 flathead screws
- 4.2** Secure the reflectors to the wall framing using #6 flathead screws. Note: The screw head must be flush with the reflector, otherwise there will be interference with the LED Extrusion. Countersink should be big enough for #6 flathead screws.
- 4.3** Apply caulk or plaster to cover seams of the Reflectors. If desired, paint the Reflector using a matte finish.

Joiner Power Feed Section to LED Extrusion

LED Extrusions Installation

NOTE: Always install corner piece first

- 6.1** Measure and cut LED Extrusions to length to fit inside the drywall cutout.
- 6.2** Start with installing the welded corner pieces and then install the straight LED Extrusion pieces.

LED Extrusions Installation

NOTE: Powerfeed extrusion should be joined to LED extrusion before installing to the wall.

- 7.1 At Junction Box locations, route the power supply wires through the large front slots in the Power Feed Section.
- 7.2 Position the LED Extrusion up against the Reflector, then fasten the LED Extrusion to the wall framing using #6 drywall screws. Suggested minimum spacing for the screws is 16" to prevent cracking of the plaster. Ensure screw pierces wood blocking (studs) as well as drywall.

NOTE: For Joining LED extrusions and corner extrusions.

- 8.1 At joints between adjacent LED Extrusions, install the Front Aligner using provided screws.

Endcap Installation (if terminating run mid-wall)

9.1 Install the endcap(s) using #6 drywall screws fastened to the wall framing as shown below.

9.2 Apply caulk or plaster to cover seams between the Endcap and Reflector. Please note, endcaps do not mechanically attach to the LED extrusion or Reflector

LED Tape Installation - Before Plastering/Painting

Recommended for soldered LED strip install (If using minii connectors, skip to page 14)

NOTE: Make sure trap doors are installed as shown.

10.1 Remove the trap doors. Route the wire from the LED strip through the trap door slot.

10.2 snap the trap door back into place. Note Symmetric orientation of trap doors. Highlighted in red is open space for LED strip wiring.

LED Tape Installation - Before Plastering/Painting

Recommended for soldered LED strip install

- 11.1** Take the soldered LED strip then route the wires down through the Power Feed Section trapdoor opening and out through the front slots while affixing the LED Tape's adhesive backing to the LED Extrusion. LED strip will rest on top of the trap door covers
- 11.2** Connect to the power supply wires using wire nuts/connectors. Tuck the wires through the front slots and into the Junction Box.
- 11.3** Attach the Front Cover to the Power Feed Section using the provided screws.

- 12.1** Insert the foam dust protector into the LED Extrusion channel.
- 12.2** Apply thin drywall tape overlapping the LED Extrusion flange and drywall. Apply plaster to the LED Extrusion, feathering 12-16" away. Multiple coats of plaster may be required to fill in the thicker cavities of the LED Extrusion and provide a smooth even surface.
- 12.3** Sand the plastered surface and apply paint.

LED Tape Installation - After Plastering/Painting

Recommended for LED strip install with Minii Connectors. Minii connectors not available with RGB, RGBW, or Pixel LED strip

NOTE: Make sure trap doors are installed as shown.

- 10.1** Remove the trap doors. Route the wire from the LED strip through the trap door slot.
- 10.2** snap the trap door back into place.

NOTE: Tape the Minii connector to the reflector.

- 11.1** Route the Minii Connector wires down through the Power Feed Section trapdoor opening and out through the front slots. Connect to the power supply wires using wire nuts/connectors. Tuck the wires through the front slots and into the Junction Box. (OPTIONAL) tape the minii connector to the reflector to keep it out of the way during plastering/painting.
- 11.2** Attach the Front Cover to the Power Feed Section using the provided screws.
