## CONNECTION HARDWARE

### NON-POLARISED DALI CONNECTION HARDWARE

Stucchi multisystem is a 48V DC track system designed to work with DALI or 0-10V. Track power feeds and interconnectors have markings for V-, V+, D+ & D-, this polarity must be observed throughout the system.

For DALI installations the luminaires themselves are not polarity sensitive, however you must ensure the data bus wiring does not create a ring structure. A failure-free data bus cannot be ensured if one is present. If the track installation requires the use of L T or X joints, it is possible to disconnect the data bus in these joints to avoid creating a ring. Miss-wiring will result in a short and a DALI bus error.

POLARISED 0-10V CONNECTION HARDWARE

Track power feeds and interconnectors have markings for V-, V+, D+ & D-, this polarity must be observed throughout the system.

For 0-10V installations the luminaires are polarity sensitive, you must ensure the data bus wiring does not create a ring structure and that polarity is maintained in relation to the polarity key on the track by using left handed / right handed, internal and external connectors. A failure-free 0-10V cannot be ensured if this is not in place. If the track installation requires the use of L T or X joints, it is possible to disconnect the data bus in these joints to avoid creating a ring. Pay attention at joints between track sections that the polarity key feature is on the same side across tracks. Miss-wiring will result in a short or sections on non-controllable lights.

48V POWER SUPPLIES

Stucchi Multisystem track requires an external mains voltage to 48V DC power supply. These power supplies are non dimmable and deliver a constant fixed voltage of 48V to the track. Dimming controls connect directly to the databus of the track, bypassing this power supply. Our 48V track luminaires have on-board DC to DC drivers that accomodate the various dimming protocols. For number of lights per power supply please refer to luminaire specsheet.
